

Activity 1 — Explore KidCare

1. Access the staging environment for KidCare

Documentation for Staging Environment for KidCare

About KidCare

KidCare is an Android and iOS based healthcare management application developed by 366Pi Technologies to simplify pediatric healthcare workflows for Care Partners, doctors, and healthcare administrators. The platform is designed to digitally manage patient records, appointments, vaccination tracking, medical history, and health camp activities in a centralized system.

KidCare helps healthcare teams efficiently manage children's healthcare journeys by providing features such as appointment scheduling, patient registration, medical history management, growth tracking, vaccination updates, and document management.

About the KidCare Staging Environment

The KidCare Staging Environment is a testing and pre-production version of the KidCare application hosted on Microsoft SharePoint and maintained by 366Pi Technologies. It is primarily used by Care Partners and internal teams to test, validate, and manage healthcare workflows before changes are deployed to the live production environment.

The staging environment provides access to all major modules and features of KidCare, allowing users to safely verify functionalities, workflows, and data updates.

Key Functionalities Available in the Staging Environment

1. Appointment Management

- Care Partners can access the Appointment Calendar to view all scheduled appointments for children.

- Existing appointments can be updated by modifying appointment dates and available time slots.

- The platform also includes a “Manage Doctor’s Appointment & Availability Time” section to manage doctor schedules and availability.

2. Patient Registration

- Care Partners can register new patients by entering the required patient details and healthcare information.

The image shows two parts of the KidCare application interface. On the left is the 'Dashboard' with a 'New Registration' button highlighted. On the right is the 'New Patient Registration' form.

Dashboard: The top navigation bar includes 'Home', 'Calendar View', 'Dashboard', 'Care Partners', 'Appointments', 'Health Log', 'Settings', and 'Help'. The 'Care Partners' section is active, showing a list of patients with columns for ID, Name, Gender, Date of Birth, Research Status, Contact, and Appointments. A 'New Registration' button is highlighted in the top left of the dashboard.

New Patient Registration Form: This form is used to enter patient details. It includes the following fields and options:

- First Name*** and **Last Name***: Text input fields.
- Date of Birth***: Date picker (5/14/2026).
- Gender***: Radio buttons for Male (selected) and Female.
- Parent's Name***: Text input field.
- Relation***: Dropdown menu (Father selected).
- Patient Type***: Dropdown menu.
- Country Code & Phone Number***: Includes a dropdown for country code (+91 (India)) and a text field for the phone number (Enter 10 digit mobile number).
- My WhatsApp number is the same as my phone number**: A checkbox.
- WhatsApp Country Code & Number**: Includes a dropdown for country code (+91 (India)) and a text field for the number (Enter 10 digit mobile number).
- Email**: Text input field (example@email.com).
- Address**: Text input field.
- State**, **City**, and **e.g. 834004**: Text input fields.
- Cancel** and **Save**: Buttons at the bottom.

3. Periodic History Form

The application allows Care Partners to fill detailed Periodic History Forms for patients, including:

- Family History
- Prenatal History
- Birth History
- Developmental History
- Nutrition and Personal History
- Past Medical History

- Patient Summary

The screenshot shows the 'Pediatrics History Form' for a child named 'Test User' with UHID: 000000005, dated 14/05/2026. The form includes a progress bar with steps: Family History, Prenatal History, Birth History, Developmental History, Nutrition And Personal History, Past History, and Summary. The 'Family History' section is active, containing fields for Mother's Name, Father's Name, and Other Children in Family. It also includes checkboxes for tobacco use, family history of blood relatives, and allergies.

4. Appointment Booking

- Through the Patients Area, appointments can be booked by selecting a preferred date and time slot.

This screenshot shows the 'Patient Profile' page for a child named 'Test User'. The 'Book Appointment' button is highlighted with a red rectangle. The page includes fields for Name, Date of Birth, Gender, Patient's Name, UHID, and Patient Type. A table of appointments is visible below the profile information.

The screenshot shows the 'Book Appointment' form. It includes fields for Patient's Name, Appointment Type, and a 'Select Symptoms' section with checkboxes for various conditions. A calendar interface is used to select the appointment date, and a table shows available time slots for the selected date.

- After successful booking, the system generates a confirmation code for the appointment.

The screenshot shows a web interface for booking an appointment. A modal window titled "Appointment Blocked for Nav Test" is displayed in the center. The modal contains the following information:

- Date: 14-05-26
- Slot: 8:00 pm - 8:20 pm
- Confirmation Code: 569988
- An "ok" button.

In the background, the booking form is visible, including fields for "Kid's Name" (Nav Test), "Parents's Name" (Van), "Select Doctor" (Dr. Ra Binayika), "Appointment Type" (Walk-in), and a calendar for "May 2026". There are also checkboxes for "Select Symptoms" such as Fever, Vomiting, Diarrhea, Cough, Skin Rash, Loose stools, Constipation, Rashes, Ear pain, Injuries, Vaccination, Wheeze, Routine check up, Weight loss, Weight gain, and Behaviour and Development.

5. Patient Profile Management

Care Partners can update:

- Patient profile pictures
- Growth and development details
- Vaccination records
- Uploaded medical documents
- Appointment-related information

6. Doctor Management

- In the Doctors Area, users can access the Appointment List to view all scheduled consultations.
- Doctors and Care Partners can also review uploaded medical records of children.

The screenshot shows the 'Doctors Area' of the KidCare portal. The 'Appointment List' for Thursday, May 14, 2026, is displayed with a table containing three entries. Below this, the 'Medical Records' section is visible, with tabs for Prescription, Pathology, Radiology, and Past Records. On the right, a patient profile for 'Nav Test' is shown, including personal details, symptoms (Cough, Fever), and anthropometry (Weight: 20 Kg, Height: 200 Cm, Head Circumference: 0 Cm, BMI: 5.00 Kg/m²).

Sl. No.	Name	Start Time	End Time	Type	Join Call	Verification Call
1	Vivek	7:20 PM	7:40 PM	Walk-in		
2	Nav Test	7:40 PM	8:00 PM	Walk-in		
3	Nav Test	8:00 PM	8:20 PM	Walk-in		

Sl.No	Appointment Date	Doctor	Actions

Patient Profile: Nav Test
 Age: 0 years 0 months
 Gender: Female
 Parent's Name: Van
 Patient Type: In-Patient
 Address: -
 Contact: 9999999999

Symptoms: Cough, Fever

Anthropometry:
 Weight: 20 Kg
 Height: 200 Cm
 Head Circumference: 0 Cm
 BMI: 5.00 Kg/m²

[View Pediatrics History](#)

7. Care Partner Dashboard

- The Care Partners section displays all registered patient records.

The screenshot shows the 'Care Partners' section of the KidCare portal. It features a table with 10 registered patients, including their Sl. No., UHID, Name, Gender, Date of Birth, Parent's Name, Contact, and App Login C... On the right, a detailed view of a patient's record is shown, including their profile picture, name, date, time, and symptoms.

Patient Profile: Vivek
 Date: 14-05-2026
 7:20 PM - 7:40 PM
 (Walk-in)
 Symptoms: Fever

Patient Profile: Nav Test
 Date: 14-05-2026
 7:40 PM - 8:00 PM
 (Walk-in)
 Symptoms: Cough, Fever

Patient Profile: Nav Test
 Date: 14-05-2026
 8:00 PM - 8:20 PM
 (Walk-in)
 Symptoms: Fever

- Appointment booking statuses can be updated as:
 - Confirmed
 - Completed
 - Not Visited

- Cancel Appointment

8. Health Camp Management

- Users can create and manage Health Camps by entering:
 - Camp Title
 - Description
 - Venue
 - Camp Timing

The screenshot shows the 'New KidCare HealthCamp Form' interface. It includes the following fields and options:

- Camp Title ***: A text input field.
- Camp Description ***: A text input field.
- Venue ***: A text input field.
- Start Date and Time ***: A date and time picker showing 'Thu May 14 2026' at '6:16 PM'.
- End Date and Time ***: A date and time picker showing 'Thu May 14 2026' at '6:16 PM'.
- Choose File**: A button to upload a file, highlighted with a red dashed box.
- Cancel** and **Submit**: Buttons at the bottom of the form.

- Children can be added to the camp attendance list for participation.

2. Understand user flow for a parent/guardian

2. Simple User Flow for Parent/Guardian in KidCare

1. Discovery & Registration

The journey starts when the parent or guardian wants a health checkup or teleconsultation for their child.

How they connect:

- Through the **KidCare App**
- WhatsApp
- Phone call
- Care Partner assistance

What happens:

- Parent installs the KidCare app.
- Care Partner helps in registration.
- Child's details and previous medical records are uploaded.
- A patient ID (UHID) is generated by the hospital.

Documents collected:

- Previous prescriptions
- Medical reports
- Initial assessment details
- Payment receipt

2. Appointment Booking

After registration, the parent books an appointment for the child.

Booking can happen through:

- KidCare App
- Portal
- Care Partner
- Phone call

During booking:

- Date and time slot are selected.
- Appointment gets confirmed.
- Parent receives appointment details.

For existing patients, appointments can be booked directly using the app.

3. Tele Consultation with Doctor

At appointment time:

Parent/Guardian:

- Joins the telecall from the appointment calendar.
- Child attends online consultation with the doctor.

Doctor:

- Reviews patient history.
- Gives medical advice.
- Creates prescription.

Care Partner:

- Sends scanned prescription.
- Updates records on portal.

4. Post Consultation Activities

After consultation:

Reports & prescriptions are uploaded:

- Prescription
- Investigation reports
- Pharmacy reports

Parent receives updates through:

- WhatsApp
- SMS
- Portal notifications

Additional actions:

- Doctor comments are shared.
- Follow-up appointment may be scheduled if needed.

5. Follow-Up & Feedback

After treatment:

Parent/Guardian may:

- Give feedback
- Book follow-up appointment
- Share testimonials
- Review patient progress

If doctor feels another consultation is needed:

- New appointment is booked.

Otherwise:

- Process ends after recovery and monitoring.

Overall Simplified Flow**Parent Journey in One Line**

Register Child → Book Appointment → Attend Online Consultation → Receive Prescription & Reports → Follow-up if Needed

3. Summarize core features and value proposition**KidCare – Short Summary**

KidCare is an Android-based pediatric healthcare management platform developed by 366Pi Technologies that helps Care Partners, doctors, hospitals, and parents manage child healthcare digitally. The platform simplifies appointment booking, teleconsultation, medical record management, vaccination tracking, growth monitoring, and healthcare communication in one centralized system.

Core Features of KidCare

- Patient registration and profile management
- Appointment booking and scheduling
- Teleconsultation with doctors
- Digital prescriptions and medical reports
- Vaccination and growth tracking
- Periodic child health history management
- Health camp creation and management
- WhatsApp and portal-based communication

KidCare Staging Environment

The KidCare Staging Environment is a pre-production testing platform hosted on Microsoft SharePoint and maintained by 366Pi Technologies. It is used by Care Partners and internal teams to test and validate healthcare workflows before deployment to the live environment.

Key Functionalities

- Appointment calendar and doctor availability management
- Patient registration and appointment workflows
- Medical document and prescription uploads
- Consultation and follow-up tracking
- Care Partner dashboard and appointment status updates
- Health camp management and attendance tracking

Value Proposition

KidCare improves pediatric healthcare management by:

- Digitizing healthcare workflows
- Reducing manual paperwork
- Enabling remote consultations
- Centralizing patient records
- Improving communication between doctors, parents, and Care Partners
- Making child healthcare more organized, accessible, and efficient.

Activity 2 — Understanding Fennex

Write a short summary of what Fennex does understand how and on what projects we work with Fennex.

[Fennex](#) is a digital transformation and enterprise software company that mainly works in the offshore energy, oil & gas, renewable energy, and industrial safety sectors. The company builds cloud-based platforms, AI-powered safety systems, operational risk tools, compliance solutions, and workflow management systems for large industrial organizations.

What Fennex Does

Fennex focuses on improving:

- Health, Safety & Environment (HSE)

- Operational risk management
- Compliance and assurance
- Workforce safety
- Inspection and audit processes
- Offshore wind safety
- Digital workflow automation
- Enterprise collaboration systems

Their solutions help companies replace manual paperwork and spreadsheets with centralized digital platforms that improve:

- Safety
- Efficiency
- Reporting
- Compliance
- Predictive analysis
- Operational visibility

Fennex mainly provides:

1. Compliance & Assurance Solutions

Helps companies:

- Manage operational compliance
- Maintain safety standards
- Track procedures and policies
- Digitize audits and inspections
- Improve governance and reporting

2. Risk Management Solutions

Focused on:

- Operational risk tracking
- Hazard identification
- Safety assessments

- Incident prevention
- Predictive risk analysis using AI

3. Health & Safety Solutions

Used for:

- Workforce safety management
- Safety observations
- Incident reporting
- Behavior-based safety systems
- Offshore safety compliance

Major Products Developed by Fennex

[BBSS – Behaviour Based Safety System](#)

A safety observation and behavior tracking platform used to improve workplace safety and reduce incidents.

[WindSafe](#)

An offshore wind safety and workforce management solution for renewable energy projects.

[AI Predictive Safety](#)

Uses AI and analytics to predict safety risks and prevent incidents before they occur.

[Audit & Inspections Platform](#)

Digital inspection and compliance management system.

[ORA – Operational Risk Assessment](#)

Helps organizations digitally manage operational risk assessments.

Activity 3 — Basics of SharePoint

Understand key uses like document libraries, sites, and workflows and note 3 use cases where SharePoint can help in enterprise workflows.

1. What is SharePoint ?

SharePoint is a web-based collaboration and document management platform by Microsoft. It helps organizations store, organize, manage, and share information securely. Widely used in enterprises for teamwork, communication, workflow automation, and content management. Part of the Microsoft 365 ecosystem and accessible through browser, desktop, and mobile devices

2. Core Features of SharePoint

- Document Libraries
- Lists and Data Management
- Team Sites and Communication Sites
- Version Control
- Search and Metadata
- Workflow Automation
- Permissions and Security
- Integration with Microsoft 365

3. Document Libraries

Document Libraries are secure storage locations for files. Users can upload Word, Excel, PDF, images, videos, and other documents. Supports check-in/check-out and version history. Allows collaboration where multiple users can work on the same file. Documents can be organized using folders, tags, and metadata

4. SharePoint Sites

A SharePoint site is a secure, web-based workspace hosted by Microsoft where teams can store, organize, share, and collaborate on information. It serves as a central hub for document management, team communication, and project tracking within an organization.

Key Components of a SharePoint Site

- **Document Libraries:** Secure spaces to store, share, and co-author files (like Word and Excel) in real-time.
- **Lists:** Interactive databases that function like smart spreadsheets, allowing you to track inventory, project statuses, or event itineraries.
- **Pages:** The visible, customizable layout of your site where you can add news, images, and embedded videos.
- **Web Parts:** Modules you can add to your pages (e.g., calendars, document libraries, countdown timers) to customize the site's functionality.

The Two Main Types of Sites

Depending on our goals, we will generally create one of two site types:

1. **Team Sites:** Designed for collaboration. When we and our colleagues need to work together on files, track issues, and share updates, a Team site provides a dedicated workspace for that specific project or department.
2. **Communication Sites:** Designed for broadcasting information. These are used for company-wide intranets, HR portals, or newsletters to share news and policies with a broad audience.

5. Workflows and Automation

Workflows automate repetitive business processes. Built using Power Automate and SharePoint integration. Examples include approval workflows, notifications, reminders, and escalations.

Reduces manual work and improves operational efficiency

6. 3 Use Cases where SharePoint can help in enterprise workflows

ENTERPRISE USE CASE 1 – HR MANAGEMENT

1. Store employee documents securely.
2. Manage onboarding and exit processes.
3. Automate leave and approval workflows.
4. Create internal HR portals for employees.

ENTERPRISE USE CASE 2 – PROJECT COLLABORATION

1. Share project files and reports.
2. Track project progress and tasks.
3. Collaborate between departments and remote teams.
4. Maintain centralized project documentation.

ENTERPRISE USE CASE 3 – HEALTHCARE SYSTEMS

1. Manage patient-related documents securely.
2. Track appointments and reports.
3. Support healthcare workflows and compliance.
4. Used in systems like KidCare staging environment for care management.
